The atveryend package

Heiko Oberdiek <heiko.oberdiek at googlemail.com>

2011/06/30 v1.8

Abstract

This IATEX package provides two hooks for \end{document} that are executed after the hook of \AtEndDocument. \AfterLastShipout can be used for code that is to be executed right after the last \clearpage before the .aux file is closed. \AtVeryEndDocument is used for code after closing and final reading of the .aux file.

1 Documentation

There are packages (e.g. hyperref [4], lastpage [6]) that want to call code after the typesetting is done, for example to remember the last page number. LATEX provides the hook \AtEndDocument (clsguide [1]). There are packages that use this hook to do their job for typesetting pages (e.g. endfloat emits the floats here [2]). Also a user might provide additional code in \AtEndDocument. Therefore packages have to call \clearpage in \AtEndDocument to get after the last shipout page. But this is not too reliable, because the right timing is important between packages that want or have to do things before the last page is output and packages that only work properly if they can reach the point after the last shipout.

Therefore the task of this package is to provide additional hooks for \end{document}. All hooks are called after the hook of \AtEndDocument.

\BeforeClearDocument $\{\langle code angle\}$

The code is called before the final \clearpage in \enddocument. However it is unknown, whether the last page is already shipped out or if this will be triggered by the final \clearpage.

$\Lambda fterLastShipout \{\langle code \rangle\}$

The code is called after the final \clearpage of \enddocument before the main .aux file is closed. This is the right place to remember the last page in the .aux file, for instance.

$\AtVeryEndDocument \{\langle code \rangle\}$

The code is called after the <code>.aux</code> file is closed and read in again. It is the place for final checks, rerun hints, final messages.

$\AtEndAfterFileList \{\langle code \rangle\}$

After the .aux file closing and reading LATEX prints the file list if requested by \listfiles. Then this hook is executed.

$\Lambda t Very Very End \{\langle code \rangle\}$

This code is called right before the final \@@end.

1.1 Related work

Package scrile: Markus Kohm has written package scrifile (part of KOMA-Script [5]) that provides hooks \BeforeClosingMainAux and after \AfterReadingMainAux. They have the same function as the hooks of this package. In fact this package uses them, if they are available.

Class revtex4-1: This class calls \clear@document in \enddocument that wraps the final call of \clearpage. Thus it can be used as hook to call stuff after that \clearpage. This is also done by this package.

Package etoolbox: It provides \AfterEndDocument, a hook right before \deadcycles or \@@end [3].

This package tries to combine as many approaches as possible:

- It looks for a known \enddocument and redefines it.
- Hooks that are provided by others are used (package scrlfile or class revtex4-1.
- It redefines \Ocheckend and \Odofilelist to insert the hooks similar to package scrifile.
- The hook execution is wrapped in a macro that is redefined by its first call to prevent calling the hook more than once.

567
         \AfterReadingMainAux{\Call@AtVeryEndDocument}%
568
     }{}%
569
2.5.2 Package etoolbox
     \@ifpackageloaded{etoolbox}{%
570
571
       \AtVeryEnd@ifundefined{AfterEndDocument}{}{%
572
         \AfterEndDocument{\Call@AtVeryEndDocument}%
573
     }{}%
574
```

2.6 Class letter

575 }

The class letter and some similar classes insert material (\@startlabels) at the end of the document. However, this method violates a precondition of this package that the \clearpage in \enddocument is the final call with no material at later times. Therefore we move the label making from the .aux file to \AtEndDocument.

```
576 \def\AtVeryEnd@temp{%
     \AtBeginDocument{%

4 Installation

4.1 Download

Package. This package is available on CTAN¹:

CTAN:macros/latex/contrib/oberdiek/atveryend.dtx The source file.

¹ftp://ftp.ctan.org/tex-archive/

CTAN:macros/latex/contrib/oberdiek/atveryend.pdf Documentation.

Bundle. All the packages of the bundle 'oberdiek' are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

```
CTAN:install/macros/latex/contrib/oberdiek.tds.zip
```

TDS refers to the standard "A Directory Structure for TEX Files" (CTAN:tds/tds.pdf). Directories with texmf in their name are usually organized this way.

4.2 Bundle installation

Unpacking. Unpack the oberdiek.tds.zip in the TDS tree (also known as texmf tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

Script installation. Check the directory TDS:scripts/oberdiek/ for scripts that need further installation steps. Package attachfile2 comes with the Perl script pdfatfi.pl that should be installed in such a way that it can be called as pdfatfi. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

4.3 Package installation

Unpacking. The .dtx file is a self-extracting docstrip archive. The files are extracted by running the .dtx through plain T_EX :

```
tex atveryend.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as texmf tree):

If you have a docstrip.cfg that configures and enables docstrip's TDS installing feature, then some files can already be in the right place, see the documentation of docstrip.

4.4 Refresh file name databases

If your TEX distribution (teTEX, mikTEX, ...) relies on file name databases, you must refresh these. For example, teTEX users run texhash or mktexlsr.

4.5 Some details for the interested

Attached source. The PDF documentation on CTAN also includes the .dtx source file. It can be extracted by AcrobatReader 6 or higher. Another option is pdftk, e.g. unpack the file into the current directory:

```
pdftk atveryend.pdf unpack_files output .
```

Unpacking with LATEX. The .dtx chooses its action depending on the format:

plain T_EX: Run docstrip and extract the files.

LATEX: Generate the documentation.

If you insist on using LATEX for docstrip (really, docstrip does not need LATEX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{atveryend.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file ltxdoc.cfg. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfIATEX:

```
pdflatex atveryend.dtx
makeindex -s gind.ist atveryend.idx
pdflatex atveryend.dtx
makeindex -s gind.ist atveryend.idx
pdflatex atveryend.dtx
```

5 Catalogue

The following XML file can be used as source for the TEX Catalogue. The elements caption and description are imported from the original XML file from the Catalogue. The name of the XML file in the Catalogue is atveryend.xml.

```
775 (*catalogue)
776 <?xml version='1.0' encoding='us-ascii'?>

8 History

[2009/12/06 v1.0]

• The first version.

[2009/12/07 v1.1]

Bug fixes.

[2009/12/09 v1.2]

• Additional support of classes and packages.

[2009/12/11 v1.3]

- Patch for letter like classes that puts label into the 'aux' file.
- Hook \BeforeClearDocument added (request from Arthur Ogawa).
- Patch of \clear@document removed (Arthur Ogawa).
- A nested \AtBeginDocument removed.

[2010/01/25 v1.4]

• Moved from TDS:*/generic/* to TDS:*/latex/*.

[2010/03/24 v1.5]

• \Call@BeforeClearDocument fixed (Ahmed Musa).

[2011/04/15 v1.6]

- $\verb|\CallQAtEndAfterFileList| and \verb|\CallQAtVeryVeryEnd| added.$

[2011/04/23 v1.7]

• Some fix for \AtVeryEnd@RedefCheckEnd to avoid error because of undefined control sequence in some circumstances (thanks to D.P. Story for bug report).

[2011/06/30 v1.8]

- Support of changed \enddocument of LATEX $2_{\mathcal{E}}$ 2011/06/27.
