# The pmboxdraw package

# Heiko Oberdiek <heiko.oberdiek at googlemail.com>

# 2011/03/24 v1.1

## Abstract

Package pmboxdraw declares box drawings characters of old code pages, e.g. cp437. It uses rules instead of using a font.

## 1 User interface

#### 1.1 Introduction

In old code pages (CP 437, ...) many slots are occupied by graphical characters. The definition files for the input encodings that come with LATEX's package inputence ignore these characters. This packages tries to close this gap. Package inputenx provides more complete definitions files of input encodings ([1]).

The graphical characters are available in some fonts, mostly some derivates of Courier. However, the symbols are usually used to gegnerate some kind of ASCII art. Thus it should fit with the current typewriter font in use. That means:

- Same and constant symbol width.
- Use of the full line height. Vertical lines should not be interrupted if the symbols that contribute to that lines are in adjacent text lines.

Therefore I decided to generate the symbols by rules. Parameters such as rule width and box dimensions are accessible at macro level. This avoids to generate many fonts for the used typewriter fonts (Courier, LuxiMono, Computer/Latin Modern, ...).

The disadvantage is that there are no characters in the output file, just rules. Thus operations such as cut and paste or text search will not detect these graphical characters.

## 1.2 Setup

Usually the box drawings symbols of this package derive its parameters from the current font. But they can be set explicitly.

#### $\protect\pro$

The  $\langle template \rangle$  is used as size template for the symbols. It is initialized by \strut0. (Usually \strut carries the information about the \baselineskip and 0 the symbol width.)

## \pmboxdrawrulewidth $\{\langle dimen \rangle\}$

This macro allows the setup of the rule width used in the symbols. It is initialized with 0.1\width, that means 10% of the symbol width. \width, \height, and \depth can be used here and are set to the corresponding symbol box parameter.

#### \pmboxdrawdoublerulesep $\{\langle dimen \rangle\}$

Some symbols have double lines. The distance between the lines is configured by this macro. It is set to 0.25\width, a quarter of the symbol width. Also \height and \depth are available.

## 1.3 Symbol list

The macro names for the symbols in LATEX (LICR) are derived from Adobe's glyph names for these characters ([2]). Example:

## U+2580 ( ) with glyph name upblock: \textupblock

Some glyph names start with SF, two individual digits follow and the name is closed by four digits zero. For the LICR name the two individual digits form a number that is converted to lowercase roman number. The trailing zeros are dropped. Example:

U+2556 ( ) with glyph name SF210000: \textSFxxi

The three gray symbols require package color:

 $\begin{array}{c} \text{U+2591} \ ( \ \ \ \ ) \ \text{light shade: $\tt \text1tshade} \\ \text{U+2592} \ ( \ \ \ \ \ ) \ \text{medium shade: $\tt \textshade} \\ \text{U+2593} \ ( \ \ \ \ \ ) \ \text{dark shade: $\tt \textdkshade} \end{array}$ 

It follows a list with all graphical symbols provided by this package:

Symbol	Unicode	Glyph name	LICR

# 4 Installation

### 4.1 Download

**Package.** This package is available on CTAN<sup>1</sup>:

CTAN: macros/latex/contrib/oberdiek/pmboxdraw.dtx The source file.

CTAN:macros/latex/contrib/oberdiek/pmboxdraw.pdf Documentation.

**Bundle.** All the packages of the bundle 'oberdiek' are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

```
CTAN:install/macros/latex/contrib/oberdiek.tds.zip
```

TDS refers to the standard "A Directory Structure for TEX Files" (CTAN:tds/tds.pdf). Directories with texmf in their name are usually organized this way.

## 4.2 Bundle installation

**Unpacking.** Unpack the oberdiek.tds.zip in the TDS tree (also known as texmf tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

Script installation. Check the directory TDS:scripts/oberdiek/ for scripts that need further installation steps. Package attachfile2 comes with the Perl script pdfatfi.pl that should be installed in such a way that it can be called as pdfatfi. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

# 4.3 Package installation

**Unpacking.** The .dtx file is a self-extracting docstrip archive. The files are extracted by running the .dtx through plain  $T_FX$ :

```
tex pmboxdraw.dtx
```

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as texmf tree):

If you have a docstrip.cfg that configures and enables docstrip's TDS installing feature, then some files can already be in the right place, see the documentation of docstrip.

## 4.4 Refresh file name databases

If your TEX distribution (teTEX, mikTEX, ...) relies on file name databases, you must refresh these. For example, teTEX users run texhash or mktexlsr.

<sup>1</sup>ftp://ftp.ctan.org/tex-archive/

#### 4.5 Some details for the interested

Attached source. The PDF documentation on CTAN also includes the .dtx source file. It can be extracted by AcrobatReader 6 or higher. Another option is pdftk, e.g. unpack the file into the current directory:

```
pdftk pmboxdraw.pdf unpack_files output .
```

Unpacking with IATEX. The .dtx chooses its action depending on the format:

plain TEX: Run docstrip and extract the files.

**LATEX:** Generate the documentation.

If you insist on using LATEX for docstrip (really, docstrip does not need LATEX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{pmboxdraw.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file ltxdoc.cfg. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfI4TEX:

```
pdflatex pmboxdraw.dtx
makeindex -s gind.ist pmboxdraw.idx
pdflatex pmboxdraw.dtx
makeindex -s gind.ist pmboxdraw.idx
pdflatex pmboxdraw.dtx
```

# 5 Catalogue

The following XML file can be used as source for the TeX Catalogue. The elements caption and description are imported from the original XML file from the Catalogue. The name of the XML file in the Catalogue is pmboxdraw.xml.

```
3609 (*catalogue)
3610 <?xml version='1.0' encoding='us-ascii'?>
